

Discovery Area

Children are always asking questions about the world around them. Discovery Area is where children use exploration and investigation to answer these questions.

Here at school, when in Discovery Area, children do what scientists do:

- observe
- experiment
- measure
- solve problems
- take things apart
- explore materials and living things

What you can do at home:

- make bubbles in the bathtub
 - make ice cubes
 - gardening
- taking nature walks
- ask open ended questions like: "I wonder why...?"
